

**The Initiative for Compliance and Sustainability** (<https://www.ics-asso.org>) and **the International Trade Centre** (<https://www.intracen.org>) invite you to join a FREE online platform of the United Nations which connects businesses along sustainable value chains, linked to the **ICS Database** (<https://ics.art-informatique.com>).

The platform, called **Sustainability Map** (<https://resources.sustainabilitymap.org>) and linked to the **ICS Database** (<https://ics.art-informatique.com>), already has over 57000 registered international buyers and companies. Joining the Sustainability Map platform is entirely FREE of charge.

## **STEP ONE - Complete your ICS Factory Profile in the ICS Database**

The Factory Profile is part of the ICS Audit Process and is the first document to be shared between the ICS Members, the factory and the supplier and the audit firm to understand the organization of the factory and to organize later the audit considering these data.

The Factory Profile may be requested by any ICS Member and is shared with other ICS Members having business relationships with the factory.

The questionnaire must be completed by the facility prior to the audit with data needed by the audit company to prepare for the audit.

The Factory Profile includes such data as identification information, company management, audits and certifications, factory area, manpower, products and production processes and environmental organization.

The Factory Profile will be validated during the audit opening meeting by the facility management.

The ICS Database Dashboard proposes the link to the suppliers and to the factories to complete the Factory Profile. Each part should be answered.

## **STEP TWO - Factory ID Be a part of the bigger picture in Sustainability Map**

The **Factory ID** proposes the PUBLIC DISCLOSURE within Sustainability Map of limited data coming from the Factory Profile as validated through the ICS Database.

Thanks to the Factory ID, the factories benefit from a free and neutral platform to update their business sustainability credentials and to share information with international brands and other relevant organizations and institutions. By being part of Sustainability Map, factories and suppliers will benefit from enhance visibility and business opportunities.

| ID                                                                            | Original                                                               | Review |

| Weekly rest days                                                                                                             | Sunday                                                            |
| Main Products                                                                                                                |                                                                   |
| - 1                                                                                                                          | Product Typology : Belt                                           |
| For garment factories, please indicate the number of sewing lines                                                            |                                                                   |
| Does the facility generate wastewater from production processes?                                                             | NO                                                                |
| What wastewater/effluent streams are generated at the facility?                                                              | NA                                                                |
| Does the facility have its own Effluent Treatment Plant (ETP) or is it connected to a Common Effluent Treatment Plan (CETP)? | Connected to a CETP                                               |
| If the ETP/CETP is not located at the factory's address, could you please specify the ETP/CETP exact location?               | NA                                                                |
| What is the official ETP capacity designed by the constructor? (in m3/day)                                                   | NA                                                                |
| What is the type of industrial treatment available on-site?                                                                  | No treatment (in case of the CETP is not requiring any treatment) |

|                                                                                                                                                               |                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|
| <b>Where does the wastewater from the site discharge go to after treatment?</b>                                                                               | No wastewater generated.                                       |
| <b>How many points of water sources are available on-site (number of boreholes, number of points of supply sources from municipality etc.)?</b>               | WATER FROM MUNICIPALITY                                        |
| <b>What sources of water are used at the facility (e.g. mains drinking water, mains process water, borehole abstraction, surface water abstraction etc.)?</b> | Domestic water                                                 |
| <b>What energy sources does the facility use (e.g. mains electricity, locally generated electricity, coal, oil, gas etc.)?</b>                                | mainly electricity                                             |
| <b>What are the main non-hazardous waste that the facility generates?</b>                                                                                     | production waste                                               |
| <b>Does the facility generate hazardous waste? If yes, please indicate the types of hazardous waste.</b>                                                      | waste chemical container                                       |
| <b>Does the facility store, use or handle hazardous or potentially hazardous substances?</b>                                                                  | Ask professional company to move away and deal with the waste. |
